

FARI

Scenario Test Catalog

Versioned Demo Portfolio and Coverage Matrix

Release source: FARI-SCENARIO-TEST-CATALOG-RELEASE.md

FARI v1.1.0 | 2026-06-12

This is the versioned release edition of the FARI documentation bundle. Canonical working sources for this release are stored under the same version folder.

Seeded workspace catalog for the local FARI demo database.

This release edition keeps the same portfolio coverage as the canonical source, but restructures the assessment list for easier executive reading in PDF form.

Coverage summary

- `Does Not Meet`: present in current state and in initial mitigation snapshots.
- `Meets`: present in clean success, mitigation-success, and compensating-control cases.
- `Inconclusive`: present as a closed replay-characterization case.
- `Not Assessed`: present as a draft non-gating intake case.
- `Demonstrated`, `Plausible`, `Not Demonstrated`, and `Not Evaluated` are all represented.
- Every seeded case includes an SPD-5 companion profile.

Assessment portfolio

ASM-2026-0001 Command Auth Fallback Review

- Current result: ``does_not_meet``
- Scenario disposition: ``demonstrated``
- SPD-5 companion: ``Partial alignment``
- Posture: ``partially_aligned``
- Versions: v1: Initial confirmed bypass on the legacy bridge. / v2: RF path fixed, residual maintenance bridge keeps the finding open.
- Notes: Covers a realistic partial mitigation where the executive result remains Does Not Meet.

ASM-2026-0002 Privileged Operator MFA Rollout

- Current result: ``meets``
- Scenario disposition: ``not_demonstrated``
- SPD-5 companion: ``Evidence-backed alignment``
- Posture: ``aligned``
- Versions: v1: Password-only privileged access confirmed. / v2: MFA enforced and retested successfully.
- Notes: Canonical mitigation example that ends in Meets with a clear audit trail.

ASM-2026-0003 Replay Window Characterization

- Current result: ``inconclusive``
- Scenario disposition: ``plausible``
- SPD-5 companion: ``Inconclusive due to scope``
- Posture: ``inconclusive``

- Versions: v1: Short-window replay retest only; full freshness coverage still pending.
- Notes: Reference case for Inconclusive plus Plausible and an inconclusive SPD-5 overlay.

ASM-2026-0004 Telemetry API RBAC Review

- Current result: ``meets``
- Scenario disposition: ``not_demonstrated``
- SPD-5 companion: ``Evidence-backed alignment``
- Posture: ``aligned``
- Versions: v1: RBAC and audit controls confirmed on the telemetry API path.
- Notes: Primary cloud reference for a clean success case.

ASM-2026-0005 Third-Party Firmware Intake

- Current result: ``not_assessed``
- Scenario disposition: ``not_evaluated``
- SPD-5 companion: ``Supplier attestation pending``
- Posture: ``inconclusive``
- Versions: v1: Intake-only snapshot with a real Not Assessed outcome.
- Notes: Non-gating draft case used to exercise the Not Assessed portfolio state and supplier-pending overlay.

ASM-2026-0006 SBOM Vulnerability Lifecycle

- Current result: ``meets``
- Scenario disposition: ``not_demonstrated``
- SPD-5 companion: ``Continuous assurance``
- Posture: ``aligned``
- Versions: v1: Baseline image contains libfoo 1.4.2 with an open advisory. / v2: SBOM refresh confirms libfoo 1.4.5 and closes the claim.
- Notes: Primary continuous-assurance example using SBOM, inventory events, and mitigation traceability.

ASM-2026-0007 Command-Link Confidentiality Rehearsal

- Current result: ``meets``
- Scenario disposition: ``plausible``
- SPD-5 companion: ``Compensating controls``
- Posture: ``aligned``
- Versions: v1: Scoped confidentiality result based on compensating controls.
- Notes: Reference case for Meets plus Plausible and the compensating-controls companion scenario.

Filter expectations

- Portfolio filters should show closed assessments in `meets`, `does_not_meet`, and `inconclusive`.
- The draft intake case should keep a genuine `not_assessed` overall state because its investigation is non-gating.
- Traceability comparisons should be most interesting on the MFA rollout, auth fallback, and SBOM lifecycle cases.

Suggested demo order

1. `ASM-2026-0001` for a partial mitigation that still fails.
2. `ASM-2026-0002` for a clean mitigation success.
3. `ASM-2026-0003` for a defensible inconclusive result.
4. `ASM-2026-0005` for a true draft intake and supplier-pending view.
5. `ASM-2026-0006` for SBOM-driven continuous assurance.
